

# Chemical / Petrochemical

Surface preparation in bulk storage tanks with the Spiderjet

Heat exchanger tube cleaning with lances and customised nozzles

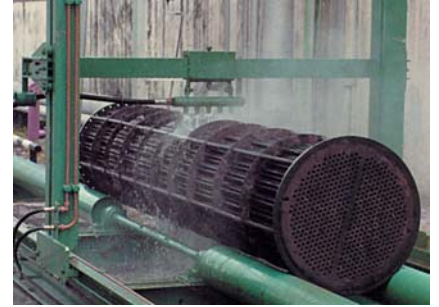

Stripping rubber from rollers

## Application examples in maintenance technology

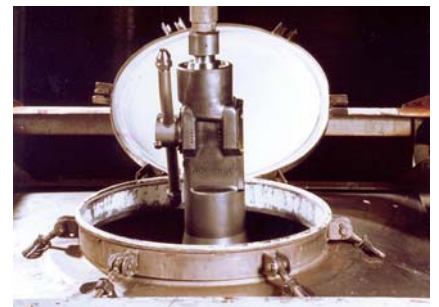

- Internal cleaning of autoclaves, reactors, pressure vessels, agitator tanks, oil storage tanks, distillation towers
- Cleaning filtration units, condensate drums, boilers, evaporators, bubble trays, air filters, mixers, dryers, barrels
- Cleaning heat exchangers and process coolers
- Decontamination and disinfection
- Cleaning pipe lines, drains
- Cleaning spraying columns, prill towers etc.
- Pressure testing vessels, pipe lines and valves
- Cleaning production and transport equipment, machining centres, workshops, parking areas
- Water abrasive cutting in hazardous zones

## Application examples in process technology

- Reactor and boiler feed pumps for a variety of mediums

External cleaning of a heat exchanger with the Pipemaster

Vessel cleaning with a tank cleaning unit deployed by a customised device

Process pumps to pump salt water extracted from crude oil back to source
